

Simplifying Time Series in Red Hat

"Server, application and human event-driven data is all time series in nature. With an open source core, InfluxData is purpose-built for time series, and developer happiness remains a key cornerstone. Red Hat® is central to the greater open source developer community. Together,

InfluxData and Red Hat create a new and efficient experience for the modern developer, who increasingly must handle more data points and more data sources across multiple systems and environments."

- ✓ Certified Red Hat container versions available on OpenShift
- ✓ Support for pull and push based metrics for better visibility
- ✓ Gather metrics and events of apps and containers
- ✓ Visualize all data gathered in Chronograf or Grafana

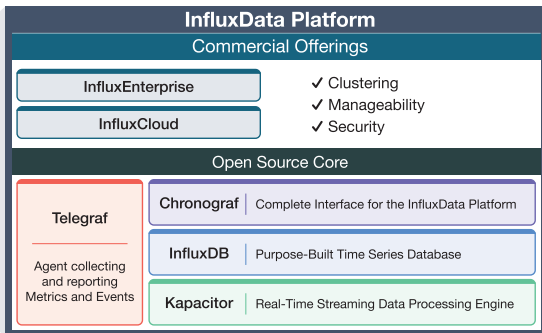

The InfluxData Platform

THE MODERN ENGINE FOR METRICS AND EVENTS

InfluxData, the creator of InfluxDB, delivers a modern Open Source Platform built from the ground up for analyzing metrics and events (time series data) for DevOps and IoT applications. InfluxData empowers developers to build next-generation applications faster, easier, and to scale delivering real business value quickly.

THE INFLUXDATA PLATFORM IS BUILT ON AN OPEN SOURCE CORE

Developer Happiness:

Ready to go on the cloud or via download. Value in minutes, not days or weeks.

Fastest Time to Awesome:

Quickly find value in your data — control systems, identify patterns, predict the future.

Ease of Scale-out & Deployment:

Millions of writes per second, and clustering to eliminate single points of failure.
